BD HW3-2 README.md

The link to the databricks code can be found:

https://databricks-prod-cloudfront.cloud.databricks.com/public/4027ec902e239c93eaaa8714f173bcfc/1252945608003937/24638044560725/5374596684377518/latest.html

First, ensure that the necessary graphframes library is installed. We used Spark version 3.2.

You will need to upload a file to databricks with two lines, one with the input file name, the other with the output file name (which does not matter). Then change the pathname in the first cell.

As per the TA's permission, we are not programmatically writing to a public location. You can find our output at the following location:

https://raw.githubusercontent.com/sudhijag/datasets/master/output%20file%20hw%203-2
